

3028000 Virginia Aquarium Marsh Pavilion Enhancements and Veterinary Center

Overview

Enhancements to the existing Marsh Pavilion Facility include creation of children exhibit play areas, renovation of the existing exhibit areas, modifications to the trail to include a new outdoor theater, a small café, and a more welcoming entrance. The project also includes a new 13,000sf Veterinary Center so visitors can observe the Aquarium's husbandry and medical staff care for the animals in the exhibit collection and conservations programs and will feature an exhibit area that will include space where children can role-play as Aquarium scientists and help injured or sick animals.

The project is being designed by Waller, Todd, & Sadler Architects of Virginia Beach.
